

Shopping Application.

Functionality:

1. User sign-in signup. The application should have 2 types of roles, ADMIN, and USER.
2. Admin functionality -> CRUD of products per category, block unblock the users.
3. Users should be able to search for products per product name, price range, rate, etc.
4. Users should be able to rate the product(1-5), leave a comment on it.
4. Please use PostgreSQL or MySQL as RDBMS. Usage of Spring Data + JPA + Hibernate is preferable.
5. UI is optional, only web service + postman collection for all possible requests is enough.
6. Please push your work on GitLab, GitHub, or Bitbucket.
7. It would be great to deploy the application somewhere and provide the URL.(Optional)

Please use Spring Boot's last version for this application.
